WHAT ARE THE RISKS AND WHAT COULD I GET IN RETURN?

Risk indicator

 The risk indicator assumes you keep the product for a minimum of 4 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. You may not be able to sell your product easily or may have to sell at a price that significantly impacts on how much you get back. The redemption price may, depending on the evolution of the net asset value, be higher or lower than the paid issue price.

Specific reasons, such as change restrictions or circumstances outside the control of the Depositary Bank, may render impossible the transfer of redemption amount in the country where the redemption is requested. In case of mass redemptions, the Management Company may decide to suspend the redemptions until it has sold the necessary assets. The summary risk indicator ("SRI") is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified this product as class 3 out of 7, which is a medium-low risk class. This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact the capacity of the fund to pay you.

Other risks materially relevant not included in the SRI: Credit Risk, Derivatives Risk, ESG Risk, Interest Rate exposure Risk, Liquidity Risk, Operational risk, This product does not include any protection from future market performance.
